

Natural Resources Management

Natural Resources

Now more than ever, decisions about the use of natural resources must be carefully weighed. The long-term nature of land use decisions makes accurate assessments of a proposed action extremely important. At the same time, the maze of issues which must be considered in project planning continues to grow. At Epsilon Systems Solutions, Inc. (Epsilon Systems), we have a thorough understanding of the natural resource issues and concerns required in siting, developing, permitting, and implementing your project.

The Natural Resources Management team provides sensitive plant and wildlife surveys, biological baseline studies, mitigation planning and monitoring (selection and implementation of best management practices), Clean Water Act 404 and 401 evaluations, wetland identification, and the day-to-day activities involved with threatened and endangered species program management.

(Continued on back)

Program Services:

- Biological Assessments/Evaluations
- Threatened, Endangered, and Sensitive Species Surveys and Audits
- Clean Water Act 404 and 401 evaluations
- Baseline Resource Inventories
- Vegetation Inventory, Evaluation, and Mapping
- Land Use Inventories
- Natural Resource Management Plans
- Mitigation/Monitoring Plans
- Cumulative Impact Analysis
- Visual Assessments
- Siting Studies
